

## Activity: The Screen Time Audit

### Scenario

The **Student Council** is organizing **Digital Wellbeing Week**. They surveyed Grade 11 students to find out how many hours they spend each week on different apps and activities outside of schoolwork.

#### As a Data Analyst, your task is to:

- Enter the data into Excel.
- Calculate the total weekly hours.
- Create the most suitable chart.
- Identify which activity has the highest screen time.

---

#### Dataset

| App / Activity                    | Weekday Hours | Weekend Hours | Total Weekly Hours |
|-----------------------------------|---------------|---------------|--------------------|
| Social Media / Chatting           | 10            | 8             | 18                 |
| Online Gaming                     | 8             | 12            | 20                 |
| Streaming Video (YouTube/Netflix) | 12            | 10            | 22                 |
| Educational / Coding Apps         | 4             | 2             | 6                  |
| Creative Apps (Art/Music/Editing) | 3             | 3             | 6                  |

#### Task 1: Enter & Calculate

- Type the data into Excel.
- In **D2**, enter **=B2+C2**.
- Copy the formula down.

#### Task 2: Create the Chart

- Select **App / Activity** and **Total Weekly Hours** (use **Ctrl**).
- Insert a suitable **Chart**.

#### Task 3: Format the Chart

- Chart Title: **Grade 11 Weekly Screen Time**
- Add **Data Labels**.
- Change the **highest bar** to **Red**.
